DETAILED ACTION

Allowable Subject Matter

1. Claims 1-18 are allowable over the prior art of record.
2. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 1, the invention relates to a data reproduction apparatus/method that can suitably be used for time series fast forward or reverse reproduction of video data or audio data recorded in a disk-shaped recording medium such as an optical disk or a magneto-optical disk.

The closest references Ohtaka et al (US 5,392,129) disclose a signal processing apparatus for concealing uncorrectable errors during signal reproduction in a digital signal recording and reproducing apparatus for digitizing a video signal and recording and reproducing the digitized signal, and Kawamura et al (US 6,308,004) teach a data reproduction apparatus and a data storage medium that can be preferably applied to, for example, those using a storage medium with digitized moving picture stored therein.

However, Ohtaka et al and Kawamura et al fail to explicitly disclose a data reproduction apparatus, where the apparatus comprises a control means for controlling the data output from the memory means to the decoding means by referring to the first piece of data information detected by the first data information detection means and the

second piece of data information detected by the second data information detection means, wherein the second piece of data information corresponds to a navigation pack.

Regarding claim 10, the invention relates to a data reproduction apparatus/method that can suitably be used for time series fast forward or reverse reproduction of video data or audio data recorded in a disk-shaped recording medium such as an optical disk or a magneto-optical disk.

The closest references Ohtaka et al (US 5,392,129) disclose a signal processing apparatus for concealing uncorrectable errors during signal reproduction in a digital signal recording and reproducing apparatus for digitizing a video signal and recording and reproducing the digitized signal, and Kawamura et al (US 6,308,004) teach a data reproduction apparatus and a data storage medium that can be preferably applied to, for example, those using a storage medium with digitized moving picture stored therein.

However, Ohtaka et al and Kawamura et al fail to explicitly disclose a data reproduction method, where the method comprises detecting a first piece of data information proving the rightness or wrongness of reproducing the data as signal by using the address information of the data reproduced by the reproduction means, detecting a second piece of data information indicating a data to be reproduced as signal among the data subjected to the error correcting operation, and reproducing the data to be decoded under control by referring to the first piece of data information and the second piece of data information, wherein the second piece of data information corresponds to a navigation pack.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher O. Onuaku whose telephone number is (571) 272-7379. The examiner can normally be reached on M-F 8:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Groody can be reached on (571) 272-7950. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
